

Unit 4

Vowels (1)

Approaching vowels via acoustic and articulatory phonetics

Print version of the
Phonetics with Listening Practice (British)
presentation given on
23 / 24 November 2021

Robert Spence, LangSciTech, Saarland University

⟨English Phonetics: Unit 4:⟩

/ˈɪŋ ɡlɪʃ/ /fə ˈnet ɪks/ /ˈjuːn ɪt/ /ˈfɔː/

[ˈɪŋ.ɡlɪʃ fə.ˈnet.ɪks ˈjuː.nɪp ˈfɔː] (AusE)

⟨Vowels (1)⟩

/ˈvaʊəlz/ /wʌn/

[ˈvæəlz ˈwʌn] (AusE)

⟨Approaching vowels via acoustic and articulatory phonetics⟩

/ə ˈprəʊtʃɪŋ/ /vaʊəlz/ /ˈvɑː ə/ /ə ˈkuːst ɪk/ /ən(d)/ /ɑː ˈtɪk jəl ət_ər i/ /fə ˈnet ɪks/

[ə.ˈprəʊtʃɪŋ ˈvəʊ.əlz ˈvɑː.ə.ə. ˈkʰuː.st.ɪk_ən_ɑː. ˈtʰɪk.jəl.ət_ɪ.i fə.ˈnɛt.ɪks (modern RP)]

4.1

4.2

1 Goals

The goals of today's session are:

1. To briefly discuss the acoustics of sound, concentrating on vowel sounds as made in the human vocal tract (10 mins)
2. To become acquainted with the vowel quadrilateral and the cardinal vowels (10 mins)
3. To check which vowel phonemes in English fall close to cardinal vowels, and which do not (10 mins)
4. To prepare the ground for a comparison between German and English vowel phonemes and their typical phonetic realizations (allophones) (10 mins)

4.3

2 Acoustic phonetics and vowels

Brief overview of acoustic phonetics in relation to vowels

1. Physics of sound waves
2. Overtones and formants
3. Distinguishing vowels by means of formants
4. How to read a spectrogram

4.4

Physics of sound waves

- Motion of particles in direction of propagation of wave ...
- ... but can be represented perpendicular to it.
- Musical sounds as an easy “way in”
- <http://www.spence.saar.de/akustik.jpg>

4.5

Overtone and formants

- voiced continuants and nasals have a fundamental frequency (F_0 , "F zero")
- partial overtones (or 'upper harmonics'):
- http://upload.wikimedia.org/wikipedia/commons/c/c5/Harmonic_partials_on_strings.svg
- formants: *amplified* upper harmonics
- identifying vowels by their formants (F_1 and F_2)

4.6

Distinguishing vowels by means of formants

- The distinctive 'quality' of a vowel depends on how the vocal tract was shaped when it was being formed, and thus on the acoustic 'formants' (especially F_1 and F_2)
- http://upload.wikimedia.org/wikipedia/commons/7/77/Spectrogram_- iua- .png

4.7

How to read a spectrogram

- a spectrogram records: frequency (y), time (x), intensity (shading)
- <http://en.wikipedia.org/wiki/File:Praat-spectrogram-tatata.png>
- <http://en.wikipedia.org/wiki/Spectrogram>
- <http://upload.wikimedia.org/wikipedia/commons/c/c5/Spectrogram-19thC.png>

4.8

3 Vowels: phonetics vs phonemics

Vowels: phonetics vs phonemics

- How many phonetically distinct vowels are there along the continuum [i] – [a] – [ɑ] – [u] ?
- How many phonemically distinct vowels are there along that continuum?
- The answer to the first question depends on how good your hearing is.
- The answer to the second question depends on what language you're talking about.
- Arabic has / i e a u / (each of these three can be short or long)
- Spanish has / i e a o u /
- Italian has / i e ε a o u /
- French has / i e ε a α o u /
- English has / i: e æ α: ɒ ʌ ɔ: ʊ u: /

4.9

4 Vowel quadrilateral and cardinal vowels

Vowel quadrilateral and cardinal vowels

left-to-right: highest point of tongue is front (left) or back (right); top-to-bottom: jaw is close (top) or open (bottom); lips are unrounded (symbol to the left of the dot) or rounded (symbol to the right of the dot); beware [ə] [ɐ] (unrounded), [ɔ̄] (rounded); NOTE: [a] is 'front' (just like [i])

4.10

Only for freaks

- the meaning of the vowel quadrilateral in terms of formants:
 - close [i] [u] (low F_1) vs open [ɑ] (high F_1);
 - back [u] [ɑ] (low F_2 , low F_2-F_1 difference) vs front [i] (high F_2 , high F_2-F_1 difference)
 - check it: https://de.wikipedia.org/wiki/Datei:Spectrogram_-iua-.png
 - synthesize some vowels yourself:
<http://www.asel.udel.edu/speech/tutorials/synthesis/vowels.html>
- synthesize some vowels yourself: <http://www.asel.udel.edu/speech/tutorials/synthesis/vowels.html>

4.11

5 English vowel phonemes vs. cardinal vowel positions

English vowel phonemes vs. cardinal vowel positions

- The cardinal vowel positions on the IPA chart are reference points, designed to ‘sound equidistant’.
- The pronunciation of the English phoneme /ə/ is [ə], i.e. it falls exactly on one of the cardinal vowel positions.
- The pronunciation of the English phoneme /e/ falls halfway between the cardinal vowel positions [e] and [ɛ].
- We write /e/ rather than /ɛ/ because we want to discourage German speakers from pronouncing that English phoneme as [ɛ], which would sound too German; pronouncing it as [e] would merely sound too Australian.
- See if you can identify other cardinal vowels that are used in pronouncing English phonemes.
- Beware the English phoneme /ʌ/. This has evolved away from the [ʌ] position, and is now nearly [ɐ]. (Should it be written as /ɐ/?)
- Look at the **diacritics** on your IPA chart for ways of ‘fine-tuning’ phonetic transcriptions of vowels.

4.12

6 Using diacritics for vowels

Using diacritics for vowels

ᵉ Raised

Lowered ɘ

ɥ Advanced

Retracted ɨ

ä Centralized

Mid-Centralized ɨ̘

ɔ̹ More rounded

Less rounded ɔ̜

ẽ Nasalized

Rhoticity ɚ̥

4.13

7 Vowels: comparing German and English

Vowels: comparing German and English

- This will be the main topic we will be dealing with in the next set of slides (in two weeks), but we will also be comparing different dialects of English with each other (next week) and getting you to practise a lot :-)
- Look at the diagrams on pages 111 and 149 of Eckert & Barry
see: pages 3 and 4 of the handout, here:
http://www.spence.saar.de/courses/phoneticswithlistening/unit04_20211/C__Handout/
- Which English vowels do you think will be most problematic for native German speakers?
- Which English diphthongs do you think will be most problematic for native German speakers?
- Have a look at the discussion on page 109 of Eckert & Barry
see: page 5 of the handout, here:
http://www.spence.saar.de/courses/phoneticswithlistening/unit04_20211/C__Handout/
